Composite Centralizer

- This kinds of composite centralizer combines the function of solid body centralizer and roller centralizer, but it has much more its features.
- There are two kinds of composite centralizers like straight or spiral blade composite centralizer and roller composite centralizer.
- The composite centralizer is one design of one-piece composite construction.
- The centralizer is with the features of smooth and lightweight construction, resist to high impact and wear.
- The composite is used in horizontal well or extended-reach with dogleg severity .
- The composite is extremely durable, which enables integrity in extreme temperature.
- For roller composite centralizer, it is easy to install and go into well when making up casing.
- Although it is low friction centralizer, in order to connect the casing, we put the steel ring on the two ends of centralizer.
- The composite provides optimal standoff for mud flowing.
- In order to make the centralizer tighten casing, we put the screws on the centralizer body, so you can save the stop collar.

Left: Composite Centralizer

Right: Roller Composite Centralizer
