Stamped Solid Rigid Centralizer

- Stamped [solid rigid centralizer](#) is designed to provide a positive stand off the casing (we also call it slip on stand off band).
- This kind of solid rigid centralizer is composed of single piece steel construction which provides a bearing surface for lower torque and drag forces.
- The blades design can reduce minimum friction when running a casing due to the smooth profile.
- It is better to increase flow-by area to optimize mud displacement in vertical, inclined, and horizontal wells.
- Available in straight or spiral blades, these blades are mechanically formed rather than welded onto the centralizer body.
- These solid rigid centralizers undergo a special coating to prevent from rust.
- The set screws can be integral with solid rigid centralizer body and then help save operation time and cost.
- The stamped solid rigid centralizer is available in all sizes from 4-1/2 inch to 20 inch, any special sizes can be available on request.

Detail of Stamped Solid Rigid Centralizer
